Reading two reports on Korean ODMs

# Why new K-beauty brands launch later than planned

It is not only that the big ODMs turn them away.

What the order rush did

# New capacity fills right away

Q3 revenue

**Kolmar Korea KRW 828.2bn** +21.2%
**Cosmecca Korea KRW 247.5bn** +35.7%

Kolmar Korea, H1 (domestic)

**Production capacity +19.5%**
**Utilization 79.5% → 81.1%**

Source: Bloter, Nov 9, 2026

So what is the alternative

# Is a smaller manufacturer the answer?

Runs of **a few hundred units** are possible.

But lead times have recently grown **more at small and mid-sized manufacturers**, because packaging and raw materials are tight.

The brand also has to manage more of the formula, packaging and certification paperwork.

**Source: Bloter, Nov 9, 2026**

Putting the two reports together

# The constraint is not the factory door

Even with utilization headroom, analysts noted Kolmar Korea's room to produce more is limited by **bottlenecks in specific processes and by staffing**.

**Process · People · Components**

Source: The Korea Economic Daily, Nov 9, 2026

As a result

# The order of work has changed

Before

Plan → Pick a manufacturer → Produce

Now

**Secure packaging and raw-material timelines and a production slot**
**→ Launch date follows**

Applied to your own business

# Where is your launch date actually being decided today?

Sung Hwan Bae · CEO, COCODEMER
